Failsafe recovery key

This is a sample of how a Failsafe recovery key could look. It cannot activate the software, and it does not contain a real license or any secret credentials.

What this is for. When you have internet again, this kind of key is meant to help you recover your Failsafe license and download the software again, even if you forget your password. A copy you already prepared keeps working offline without it.

What this does not do.

- It does not store the model or the library.
- It does not recover files from a lost or damaged drive.
- It does not run the AI.
- It is not a working login or a license bypass.
- A serial alone cannot sign you in.
- This sample cannot activate Failsafe or prove a purchase.

Sample only. Not a credential. The mark opens https://failsafe-landing.vercel.app/#ticket, a public sample page. No password, recovery secret, or license key is stored in the code or in this file. This sample cannot recover a real account.

Keep this kind of key somewhere you can find it. Retrieval needs the internet. A prepared copy on your computer or USB keeps working offline. Open Failsafe on a compatible, powered computer. Offline AI on a USB you own. This page is a sample, not a working installer or license issuer.
